# FULL STACK DATA ANALYTICS

## Scorecard

Issued

2/09/2023

Name: HUSNA ULFAH

Batch: 6

| Module                          | Score      | Notes                                                                                                                                                                                                                                                                                                         |
|---------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Understanding Business Problems | Moderate   | Capable of performing fundamental stakeholder categorization and defining the project's scope, clarify the problem statement, identify the underlying root causes, establish objectives/hypotheses, measure relevant metrics, and propose solutions or recommendations based on analysis.                     |
| Statistics & Spreadsheets       | Proficient | Proficient in applying statistics concepts to business problems, data cleaning, highlight abnormal data with statistical measurement, generate insight with descriptive statistics, examine correlations, perform regression analysis, and conduct hypothesis testing through practical implementation.       |
| SQL                             | Proficient | Shows proficiency in advanced SQL functions, including subqueries, CTE, and window functions, to write complex queries. Accurate and detail-oriented in generating datasets suitable for visualization with a deep understanding of SQL's potential for analysis.                                             |
| Python for Data Analyst         | Proficient | Proficient in Python for data analysis. Can apply RFM analysis, k-means clustering, and A/B testing independently to derive insights. Can develop propensity models using logistic regression to predict customer behavior. Generate meaningful insights and valuable business recommendations.               |
| Data Visualization              | Proficient | Proficient in generating insight from data visualization. Have effective analyzing, modeling, and interpreting data skills. Have practical creativity in applying principles of data visualization. Capable of utilizing prepared data sources to create interactive dashboards using Looker Studio & Tableau |
